

Bedford Made in the USA Laboratories

During the past 12 years, Bedford Laboratories has experienced explosive growth in the multisource injectable market. Bedford now sells 83 drugs with 231 presentations. Bedford also has three branded products in its impressive portfolio. This growth is a result of its strong research, development and manufacturing capabilities, combined with innovative marketing and excellent customer service.

- > 99% of Bedford's products are manufactured in the USA, which allows for better inventory control to meet changing customer supply and demand.
- > Over the past 12 years, Bedford Laboratories has focused its efforts on improving and advancing high-quality products that offer value to its customers.
- > An extensive, always expanding product line saves both time and money for customers by making it easier for them to purchase more from a single source. Bedford is constantly introducing new multisource products through new ANDA filings each year.
- > In conjunction with the National Cancer Institute, Ben Venue Laboratories, Bedford's parent company, has co-manufactured and co-developed several oncology agents, including paclitaxel injection (Taxol, Bristol-Myers Squibb). **OA**

“Our accelerated growth is based on successfully meeting our customers’ needs, enabling us to build an expansive customer base.”

David Gaugh,
General Manager
